DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-35 are rejected under 35 U.S.C. 103(a) as being unpatentable over
Brim et al., (US 6,049,832).

As per claims 1, 2, 12, 30, 31, and 35, Brim teaches a system for facilitating input management in a computerized environment, the system comprising:

an input manager (container application, 204) for processing events received from an input provider (user via a keyboard or mouse); and

a staging area (container application/display control, Fig. 4, 5) for holding events processed by the input manager and allowing access by external (remote/local computer display) components. (Abstract, cols. 2-14)

As per claim 3, 5, 6, 8, 13, 15, Brim teaches at least one filter (keyboard) for accessing/modifying the staging area. Brim also teaches wherein same filters are user-defined.

As per claim 4, 7, 14, 16, Brim teaches the use of a keyboard filter, however it would have been obvious to one of ordinary skill at the time the invention was made that

other types of input devices such as a mouse or a stylus could be utilized in Brim's system without departing from the inventive concept. Therefore, is use of a mouse or stylus filter would also be obvious to one of ordinary skill. Furthermore, the use of a mouse or stylus monitor would also be obvious.

As per claims 9-11, 17-19, 32-34, Brim obviously teaches implement a dictionary that would define the keyboard input that define an event state.
